THE SCIENCE

The Endocannabinoid System, or ECS for short, is a complex network of receptors that are found throughout your brain, body, and immune system. This system is believed to be responsible for balancing functions related to sleep, relaxation, and cognition. Your ECS is fueled by endocannabinoids, which are molecules produced by your body to interact with these receptors. When the production of endocannabinoids becomes slowed or imbalanced, cannabimimetics and phytocannabinoids, which are cannabinoids produced in the hemp plant, can supplement what the body may be lacking.

THE MIMETIX™ FORMULA

Typically, the conversation about the endocannabinoid system (ECS) revolves around phytocannabinoids alone. Mimetix™ takes ECS health to a whole new level.

Mimetix™ includes cannabimimetics that have a similar pharmacological impact on the ECS as phytocannabinoids. When these compounds are combined in a full spectrum, water-soluble format, they can easily be added to your daily routine to support healthy cognition and energy levels.*
