ENDOCANNABINOID SYSTEM SUPPORT

The endocannabinoid system, or ECS, is a complex network of receptors that are found throughout your body, including your central nervous system, peripheral nervous system, and immune system. The goal of the ECS is to maintain a stable internal environment despite fluctuations in the external environment. Your ECS is fueled by endocannabinoids, which are molecules produced by your body to interact with these receptors.

When the production of endocannabinoids becomes slowed or imbalanced, phytocannabinoids, which are cannabinoids produced in the hemp plant, can supplement what the body may be lacking.
